## ADJUSTABLE FEATURES

RS300 Traditional Comb

RS400T Parallel Comb

A properly fit shotgun stock is a combination of adjustments. These adjustments are unique to each individual shooter and include the drop dimensions, the proper length of pull, pad rotation and the comb alignment and height. The “fit and feel” of a shotgun and where it patterns are all dependent upon these unique dimensions.

The major challenge for most student athletes and coaches is having a shotgun that “fits” them from season to season. The adjustable RS Series shotguns are the solution to this problem.

### RS300 TARGET SEMI-AUTOMATIC

Gauge	Barrel Length	Manufacturer's Ident. Number	Stock Type	Ejection Port	Approx. Weight	Suggested Retail
12	30"	RS320ACT	Adj Sloped - RH	Right Side	7 lbs 14 oz	\$1,229.00
12	30"	RS320ACTL	Adj Sloped - LH	Left Side	7 lbs 14 oz	\$1,229.00

## DESIGNED TO FIT YOU

### ADJUSTABLE BUTT PLATE

The stock's length of pull has an adjustment range of 1 1/4" for proper gun mount and cheek placement on the comb of the stock. The pad can be rotated in either direction for proper shoulder pocket fit. This reduces felt recoil and the natural reflex to cant the toe of the pad away from the top of the pectoral muscle. The pad can also be adjusted in an up and down direction 1 1/4" to insure proper eye alignment to the sighting plane.

### ADJUSTABLE STOCK SHIM SYSTEM

A selection of 6 stock shims are provided with the shotgun. Three of the shims adjust the drop dimension of the stock from the standard drop dimension. Also included are two shims that adjust the cast from neutral to either Left or Right.

#### STOCK SHIM SYSTEM

RS300	CIP	-5	-10	5
DAC	1 1/2"	1 3/8"	1 3/8"	1 1/2"
DAH	2 3/8"	2 1/4"	2 1/2"	2 1/2"
RS400	CIP	-5	-10	5
DAC	1 3/4"	1 5/8"	1 5/8"	1 3/4"
DAH	1 3/4"	1 5/8"	1 3/4"	1 7/8"

### ADJUSTABLE COMB HARDWARE

The adjustable comb can be moved horizontally 1/4 inch from the center line of the stock in either a left or right direction. The comb can be adjusted vertically upward 1/2 inch by using washers that slide over the post. These comb adjustments ensure that the shooters eye is in alignment with the center line of the rib.

### RS - HYBRID RECOIL SYSTEM

The low recoil system of the RS400 and RS300 allows even the youngest of the youth shooters to utilize a 12ga shotgun in practice and competition. This hybrid operating system features a gas assisted, inertia recoil operating system. When a shot shell is fired it releases energy, this energy creates reactionary force that engage both the RS bolt face and the gas piston. The barrel ring of the RS contains four exhaust ports which regulate the amount of recoil force that the gas piston exerts on the action bar by bleeding off excessive gas pressure. This reduces the total energy used to cycle the shotgun which reduces the felt recoil the shooter will experience when shooting the shotgun. The RS models will cycle a range of ammunition from 1oz target loads to 1 1/4 oz heavy field loads.

CENTURY III

TRAP SINGLE BARREL

Standard & Youth Lengths

The Century III barrel features a 2 3/4" chamber, lengthened forcing cone, fitted with the competition series choke tube system and equipped with a shell extractor. The finished barrel has a highly polished chrome interior, jeweled monbloc and matte black chrome exterior. The sighting plane is a 10mm top ventilated rib with a matte surface and target sights. The white chrome finished steel receiver is a low profile box lock action with a under lug locking bolt. The trigger geometry is designed to lift the sear tail vertically. Releasing the coil spring powered hammer with less travel and pull weight, providing the shooter with a crisp, responsive feel. The Century III is equipped with a manual safety.

Create Your Custom Fit

The fit and feel of a tournament stock is a key element in the performance tuned competition shotguns. The personalized fit of an adjusted stock enables the shooter to acquire the target faster, enhances swing control, improves overall handling and reduces fatigue.

An adjustable comb allows a shooter to move the position of their cheek on the stock; so that their eye is in alignment with the centerline of the rib. The comb can be moved 1/4" from the center line of the stock either left or right. The base plate is etched with indicating lines for precise left or right adjustment. The comb height can be adjusted upward by 1/2" by using washers that slide off the posts.

The adjustable butt plate system (ABP) allows for 1 1/4" length of pull (LOP) adjustment. By simply loosening the locking screws and rotating the pad inward or outward, a personalized LOP insures proper gun mount and cheek placement on the comb of the stock. The pad can be rotated in either direction for proper shoulder fit, reducing felt recoil and the natural reflex to cant the toe of the pad away from the top of the pectoral muscle. The pad plate can be adjusted either upward or downward 1 1/4" to assist in proper eye alignment to the sight plane.

## Competition Features

The 90 Series trigger system has an improved mechanical trigger, which utilizes a vertical connector, a short sear let off, and coil springs. This new trigger geometry reduces engagement creep, pull weight, and over travel distance; resulting in a reliable, fast cycling, crisp feeling trigger.

Fabricated from high strength 4140 steel; the barrels are cut with 3" chambers, lengthened forcing cones, fitted with competition series choke tubes and equipped with automatic ejectors. The finished barrel has a highly polished chrome interior, jeweled monobloc and matte black chrome exterior. The sighting plane is a 10mm top ventilated rib with a matte surface and target sights.

# 95ATR

The 95ATR features a tournament butt stock with 7 ergonomically designed adjustment points for a personalized fit. The stock is available with either right hand "cast on" or left hand "cast off" configuration.

The adjustable comb system allows the shooter to adjust the comb height and offset position for proper eye alignment to the rib. The base plate is etched with 1/16" indicating line for precise left or right alignment of the comb. The height of the comb is adjusted by sliding washers over the selected support posts. Each shotgun includes two sets of support posts; standard and extended height.

The advanced butt plate system features 5 adjustment points that personalize the fit of the shotgun stock. The primary stock adjustment is the length of pull, which is measured from the trigger to the butt pad. A proper length allows the shooter to correctly mount the shotgun in the shoulder pocket. The length of pull is adjusted to fit the shooters height and muscular build. The LOP determines the location of the shooters cheek on the comb of the stock. The butt plate system has a 2 inch adjustment range, from a compressed 13 inch LOP to an extended 15 inch LOP.

The secondary adjustments are made to maximize the contact area of the butt pad face in the shoulder pocket of the shooter. These adjustments reduce the felt recoil of the shotgun. This butt plate system has four different adjustments that can improve the pad placement in the shoulder pocket. All of these adjustments are based upon the unique physique of the shooter.

## 95ATR TOURNAMENT STOCK Features 7 Ergonomical Adjustments Designed for Personalized Fit!

First, the cast of the pad can be rotated from a vertical position, to reduce the canting effect of the barrels due to the stocks placement in the shooters shoulder pocket. This rotation moves the toe of the pad off of the top of the pectoral muscle reducing felt recoil and improving the consistency in the shotgun mount.

Secondly, the entire pad can be lowered to increase the drop dimension of the pad relative to the height of the comb. This adjustment takes into consideration of the physical dimensions of the shooter's neck length, cheek placement and their eye alignment to the rib.

Thirdly, the pad plate can be offset in either direction from the center line of the shotgun. This will allow the shooter to either push the centerline of the rib away from their face or to draw it closer to their face. This adjustment may be necessary, dependent upon the individual's facial dimensions.

The fourth adjustment is the pitch angle of the pad which helps reduce felt recoil due to muzzle jump. The pad plate has a factory setting of 4 degrees.

Not every shooter will require adjusting each facet of this butt plate system. However, the advanced ergonomic design of the 95ATR provides the shooter with the ability to adjust the shotgun to their unique physique.

## ADJUSTABLE RIB 50/50 to 90/10

The 95ATR unsingle barrel is fitted with a tapered adjustable rib that allows the shooter to change the point of impact without adjusting the stock. The rib is adjusted by loosening two set screws with a 3mm hex wrench. Then rotating the small knurled wheel in the muzzle support block to move the rib either up or down. From the factory, the unsingle barrel is set to shoot an approximate 60/40 pattern. The point of impact can be adjusted from 50/50 to 90/10 by simply changing the angle of the rib. The indicator lines etched onto the muzzle support block provide a guide when adjusting the rib. When the rib is located on the center indicator line, the point of impact will be approximately 60/40 pattern with the comb in the lowest position.

The 95ATR barrels are fitted with the Hi-Viz comp sight system. The sight is comprised of a base and a removable litepipe. The litepipe is an optical quality plastic, of precise dimensions and color. The shooter can select the diameter and color of the litepipe to meet the individual's preference and lighting conditions of the event.

## GUN CASE

The SKB 95ATR Trap Combo case is produced in Italy by Negrini. The patented double wall ABS technology is ultra-light, ultra-strong and airline approved. The case has three TSA approved recessed steel combination locks.

The case measures 37"(L) x 13"(W) x 4"(H) and weighs 10 lbs. The compact design includes two vertical barrel compartments, an oversized receiver compartment for the adjustable tournament stock, and separate compartments for the forend and accessories.

The Model 720 box lock receiver is precisely cut by state of the art CNC machines, from a solid billet of chrome-moly steel. The locking bar is located in the base of the action. The engagement of the locking bar and the barrel lug extends across the full length of the monobloc creating a secure lock to the receiver.

The chrome lined barrels have 3" chambers (except 28ga. - 2 3/4") with lengthened forcing cones to reduce felt recoil and muzzle lift. The barrels are equipped with automatic ejectors and are fitted with an internal choke tube system. The exterior of the barrel group is highly polished then hot blued resulting in a deep luster finish.

The 720 utilizes a mechanical trigger which is a direct engagement of each sear to the trigger connector providing a very quick and reliable trigger system that does not depend upon recoil to reset the trigger for the second shot. The top tang barrel selector and integral safety allows the shooter to select the firing sequence for different hunting situations.

Sculpted by CNC machines and hand finished, the receiver has raised contoured panels to accentuate it's beautiful engraving. The brushed white chrome finish, is laser engraved with upland and waterfowl game scenes and accented with gold and scroll. This artwork is complemented by a polyurethane finished stock & forend carved from select Grade II Turkish walnut.

Small frame 28 and 410 multi-gauge sets available in 28" barrels.

# HS300

## Semi-Automatic Field Shotguns

Walnut

**HS** Hybrid Operating System is a functional combination of the inertia bolt body with a rotating head, a gas operated piston, modified steel action bar and the recoil action spring. This combination utilizes an optimum amount of combustion gases to cycle both heavy and light loads while reducing recoil.

The chrome lined ventilated rib barrel has a 3" chamber, a lengthened forcing cone and is threaded for the SKB competition choke tube system. The outer finish of the barrel is either a non-reflective matte black chrome or camouflage film fitted with a brass front bead.

Camo

Each shotgun is provided with a set of six different stock shims to assist the shooter in obtaining a personalized fit to the sighting plane. The removable stock shim will adjust for either the stock's cast or drop dimension. The shotgun has a maximum capacity of 4 - 3" shot shells; three in the magazine tube with one in the chamber.

### HS300 FIELD SEMI-AUTOMATIC

Gauge	Barrel Length	Manufacturer's Ident. Number	Field Stock	Ejection Port	Approx. Weight	Suggested Retail
12	28"	HS328CFW	Walnut	Right Side	6 lbs 15 oz	\$839.00
12	28"	HS328CFL	Walnut	Left Side	6 lbs 15 oz	\$839.00

# GUN CASES & Accessories

## HARD CASES

Type	Model Number	Exterior Case Dimensions	Interior Receiver Compartment	Barrel Compartment	Approximate Weight	Suggested Retail
Target	HC-1BBL	37 ½ x 4 ½ x 10 ⅞	22 ¼ x 2 ¼ x 7 ⅞	35 ½"	11 lbs. 6 oz.	\$269.95
Field	HC-FLD1BBL	32 ¼ x 3 ¾ x 9 ½	21 ¼ x 2 ½ x 5 ¼	30 ⅞"	9 lbs. 4 oz.	\$229.95
Field 2BBL	HC-FLD2BBL	37 ½ x 3 ¾ x 10 ⅞	22 x 2 x 5 ½	30 ½"	8 lbs. 6 oz.	\$339.95

The Field two barrel case can be utilized for the Model 720 & 690 Over & Under - 28 & 410ga two barrel sets. This case also fits the SXS two barrel sets in 28 & 410ga. Information and specifications are presented for reference only; specification tolerance will affect actual dimensions. Specifications are subject to change without notice. Weights will vary due to wood density. Shotgun not included with case.

Target HC-1BBL

Field HC-FLD1BBL

2BBL Field HC-FLD2BBL

These hard cases are sturdy wood construction, covered with a water resistant polyester canvas, lined with a wool felt, fitted with a solid handle and two combination locks.

### HC-1BBL

This case was designed for Target shotguns, it is covered in black canvas with black vinyl trim. The case features an oversized receiver compartment, allowing for a butt stock with both an adjustable comb and butt plate system. The barrel compartment features side wall compression foam and barrel blocks for vertical storage. A separate storage area for the forend allows for easier assembly and disassembly.

The Field Cases are covered in a green canvas with leather corner trim accents. Both cases have a leather handle, a leather receiver strap with buckle and storage compartment.

### HC-FLD1BBL

This case is designed to accommodate either an O/U or a SXS shotgun with a single set of barrels. The case is sized for all receiver sizes 12ga to 410ga with a barrel up to a length of 28".

### HC-FLD2BBL

This case is designed to accommodate either an O/U or a SXS shotgun with two sets of barrels. The case is sized for all small gauge receivers with barrels up to a length of 30".

All hard cases provide protection for your unloaded shotgun during short term transportation. These cases are not suited nor intended for long term storage.
